2. Citations and explanations (Rule 70.7)

The present invention discloses a method for recovering an CDMA2000 1x EV-DO system from hand-off failure in a multi-media mobile communication system, which comprises the following steps: conducting a packet data transmission between the EV-DO system and a hybrid access terminal in traffic with the EV-DO system; transmitting an update route signal for a hand-off from the hybrid access terminal to the EV-DO system; transmitting a hand-off signal from the EV-DO system to the hybrid access terminal; determining whether or not a response signal for the hand-off signal is transmitted from the hybrid access terminal to the EV-DO system; and retransmitting a traffic channel assignment signal from the EV-DO system to the hybrid access terminal if the response signal is not transmitted from the hybrid access terminal to the EV-DO system.

Claims 1-12 are considered to meet the criteria set out in PCT Article 33 (2)-(3) with respect to novelty and inventive step, because the prior art does not teach nor fairly suggest the method and technology of the present invention.
